

**Example 1:** Jack bowled four games for a total score of 500. What was his average score for a game?

**Step 1:** Find and underline or circle what the question is asking.

What was his average score for a game?

**Step 2:** Focus on and pull out important information.

four games for a total score of 500.

**Step 3:** Set up the work that is needed.

$$500 \div 4$$

(The total divided by the number of games gives the average.)

**Step 4:** Do the necessary work or computation carefully.

$$(85 + 90 + 95) \div 3 =$$

(The total divided by the number of scores gives the average.)

**Step 3:** Set up the work that is needed.

$$\underline{\underline{(85 + 90 + 95)}} \div 3 = 90$$

**Step 5:** Put your answer into a sentence to make sure that you answered the question being asked.

Jack's average score for a game is 125.

**Step 6:** Check to make sure that your answer is reasonable.

Since four games of 125 total 500, your answer is reasonable and correct.

**Example 2:** Judy scored 85, 90, and 95 on her last three algebra tests. What was her average score for these tests?

**Step 1:** Find and underline or circle what the question is asking.

What was her average score for these tests?

**Step 2:** Focus on and pull out important information.

85, 90, and 95 on three tests

**Step 3:** Set up the work that is needed.

$$(85 + 90 + 95) \div 3 =$$

**Step 5:** Put your answer into a sentence to make sure that you answered the question being asked.

Judy's average test score for these tests was 90.

**Step 6:** Check to make sure that your answer is reasonable.

Since her scores were 85, 90, and 95, the average should be halfway between 85 and 95. So 90 is a reasonable answer.

Example 3:  
cereal at \$4  
soup at \$1

Step 1: Find and underline or circle what the question is asking.  
How change will Frances get from a \$20 bill?

Step 2: Focus on and pull out important information.

two boxes at \$4 each  
three bottles at \$2 each  
two cans at \$1 each  
\$20 bill used

Step 3: Set up the work that is needed.

$$2 \times 4 =$$

$$3 \times 2 =$$

$$2 \times 1 =$$

$$\$20 - ? =$$

Step 4: Do the necessary work or computation carefully.

$$2 \times 4 = 8$$

$$3 \times 2 = 6$$

$$2 \times 1 = 2$$

$$8 + 6 + 2 = 16$$

$$20 - 16 = 4$$

Step 5: Put your answer into a sentence to make sure that you answered the question being asked.

Sarah can save \$125 by paying cash.

Step 6: Check to make sure that your answer is reasonable.

Total payments of \$30 each is \$300 plus a \$100 down payment gives \$400. This is \$125 more than \$275, so the answer is reasonable.

Step 5: Put your answer into a sentence to make sure that you answered the question being asked.

Frances will get \$4 change.

Step 6: Check to make sure that your answer is reasonable.

Since the total expenses were \$16, then \$4 change from a \$20 bill is reasonable.

of  
of  
it?

for \$275 cash or for  
payments of \$30 each.  
cash for the television?

Step 1: Find and underline or circle what the question is asking.  
How much money can Sarah save by paying cash for the television?

Step 2: Focus on and pull out important information.

cash \$275  
\$100 down plus ten payments of \$30

Step 3: Set up the work that is needed.

$$100 + (10 \times 30) =$$

$$? - 275 =$$

Step 4: Do the necessary work or computation carefully.

$$100 + (10 \times 30) = 100 + 300$$

$$\quad = 400$$

$$400 - 275 = 125$$

**Example 5:** If apples sell for \$3.25 per dozen, how many apples can Maria buy for \$13.00?

Step 1: *Find and underline or circle what the question is asking.*

how many apples can Maria buy for \$13.00?

Step 2: *Focus on and pull out important information.*

\$3.25 per dozen  
\$13.00

Step 3: *Set up the work that is needed.*

$$13.00 \div 3.25 = ? \text{ dozen}$$

= 7 dozen

Step 4: *Do the necessary work or computation carefully.*

$$13.00 \div 3.25 = 4 \text{ dozen}$$

$$= 4 \times 12$$

$$= 48$$

Step 5: *Put your answer into a sentence to make sure that you answered the question being asked.*

Maria can buy 48 apples for \$13.00.

Step 6: *Check to make sure that your answer is reasonable.*

Since Maria could buy 12 apples for about \$3, then it is reasonable that she could buy 48 apples for about \$12.

**Example 6:** Sequoia Junior High School has a student enrollment of 2000. If 30% of the students are seventh graders, how many seventh graders are enrolled at the school?

Step 1: *Find and underline or circle what the question is asking.*

how many seventh graders are enrolled at the school?

Step 2: *Focus on and pull out important information.*

2000 students  
30% are seventh graders

Step 3: *Set up the work that is needed.*

$$30\% \text{ of } 2000 =$$

Step 4: *Do the necessary work or computation carefully.*

$$30\% \text{ of } 2000 = .30 \times 2000 \\ = 600$$

Step 5: *Put your answer into a sentence to make sure that you answered the question being asked.*

There are 600 seventh graders enrolled at Sequoia Junior High.

Step 6: *Check to make sure that your answer is reasonable.*

Since 30% of 1000 is 300, then 30% of 2000 is 600.

The answer is reasonable.

**Example 8:** Each week, John spends \$50 of his income on entertainment. If John earns \$200 a week, what percent of his income is spent on entertainment?

**Step 1:** Find and underline or circle what the question is asking.

how many of his free throws make?

**Step 2:** Focus on and pull out important information.

makes 75%  
shoots eighty free throws

**Step 3:** Set up the work that is needed.

$$75\% \text{ of } 80 =$$

**Step 4:** Do the necessary work or computation carefully:

$$75\% \text{ of } 80 = \frac{1}{4} \times 80$$

$$= 60$$

$$\frac{60}{200} = \frac{1}{4}$$

**Step 5:** Put your answer into a sentence to make sure that you answered the question being asked.  
Jim makes sixty free throws.

**Step 4:** Do the necessary work or computation carefully.

$$= 25\%$$

**Step 5:** Put your answer into a sentence to make sure that you answered the question being asked.

John spends 25% of his income on entertainment.

**Step**

reasonable.

be forty,

**Step 6:** Check to make sure that your answer is reasonable.

Since 50 is half, or 50%, of 100, then 50 would reasonably be 25% of 200.

**Example 9:** The Gomez family spends 30% of their income for food. If the family spent \$6000 for food last year, what was the family income for last year?

**Step 1:** Find and underline what the question is asking.

what was the family income for last year?

**Step 2:** Focus on and pull out important information.

30% of income for food

6000 spend for food last year

**Step 3:** Set up the work that is needed.

30% of income = 6000

$30\%x = 6000$

**Step 4:** Do the necessary work or computation carefully.

$30\%x = 6000$

$30x = 6000$

$\frac{30x}{30} = \frac{6000}{30}$

$\frac{30x}{30} = \frac{6000}{30}$

$x = 20,000$ .

**Step 5:** Put your answer into a sentence to make sure that you answered the question being asked.

The Gomez family income for last year was \$20,000.

**Step 6:** Check to make sure that your answer is reasonable.

Since 30% of the family income is spent for food, and 30% of \$20,000 is \$6,000, then the answer is reasonable.

**Example 10:** A miniature piano keyboard is  $16\frac{1}{2}$  inches wide. If each key is  $1\frac{1}{2}$  inch wide, how many keys are there?

**Step 1:** Find and underline or circle what the question is asking.

how many keys are there?

**Step 2:** Focus on and pull out important information.

$16\frac{1}{2}$  inches wide

$1\frac{1}{2}$  inch keys

**Step 3:** Set up the work that is needed.

$16\frac{1}{2} + 1\frac{1}{2} =$  or  $16.5 + 1.5 =$

**Step 4:** Do the necessary work or computation carefully.

$$16\frac{1}{2} + 1\frac{1}{2} = \frac{33}{2} + \frac{3}{2}$$

$$= \frac{33}{2} \times \frac{2}{2}$$

$$= \frac{33}{2} \times \frac{2}{2}$$

$$= 11$$

Or

$$\frac{16.5}{1.5} = \frac{165}{15}$$

$$= 11$$

**Step 5:** Put your answer into a sentence to make sure that you answered the question being asked.

There are eleven keys on the miniature keyboard.

**Step 6:** Check to make sure that your answer is reasonable.

Since 16 divided by 1 is 16, and 16 divided by 2 is 8, the answer of 11 is reasonable.

**Example 11:** The low temperature on Big Bear mountain was 30 degrees on Monday, 20 degrees on Tuesday, -10 degrees on Wednesday, and 15 degrees on Thursday. If you total the changes in low temperature from each day to the next, what is the total number of degrees change?

**Step 1:** Find and underline or circle what the question is asking.

what is the total number of degrees

**Step 2:** Focus on and pull out important information.

30 on Monday  
20 on Tuesday  
-10 on Wednesday  
15 on Thursday

**Step 3:** Set up the work that is needed.

$$\begin{aligned}30 + 20 &= \\20 + -10 &= \\-10 + 15 &= \end{aligned}$$

**Step 4:** Do the necessary work or computation carefully.

$$\begin{aligned}30 + 20 &= 50 \\20 + -10 &= 10 \\-10 + 15 &= 5\end{aligned}$$

$$\text{total change} = 10 + 30 + 25 = 65$$

**Step 5:** Put your answer into a sentence to make sure that you answered the question being asked.

The low temperature changed 65 degrees during the days Monday through Thursday.

**Step 6:** Check to make sure that your answer is reasonable.

Since the low temperature dropped 10, dropped 30, and rose 25, the total of 65 is correct and reasonable.

**Example 12:** The Silverado Flash, a solar-powered land vehicle, travels at a maximum speed of 97 miles per hour. At this rate, how far will the Silverado Flash travel in 15 hours?

An important formula to remember is  $d = rt$ , or distance equals rate times time.

**Step 1:** Find and underline or circle what the question is asking.

how far will the Silverado Flash travel in 15 hours?

**Step 2:** Focus on and pull out important information.

97 miles per hour  
15 hours

**Step 3:** Set up the work that is needed.

$$\text{distance} = \text{rate} \times \text{time}$$

$$d = 97 \times 15$$

**Step 4:** Do the necessary work or computation carefully.

$$d = 97 \times 15$$

$$= 1455$$

**Step 5:** Put your answer into a sentence to make sure that you answered the question being asked.

The Silverado Flash will travel 1455 miles in 15 hours.

**Step 6:** Check to make sure that your answer is reasonable.

At 100 miles per hour for 15 hours, the Silverado Flash would have traveled 1500 miles. So the answer of 1455 miles is reasonable.

**Example 13:** Asaf can run around the track, 440 yards, in 65 seconds. At this same rate, how far could Asaf run in 195 seconds?

**Step 1:** Find and underline or circle what the question is asking? how far could Asaf run in 195 seconds?

**Step 2:** Focus on and pull out important information.

440 yards in 65 seconds

195 seconds

**Step 3:** Set up the work that is needed.

You could set up the proportion

$$\frac{440 \text{ yards}}{65 \text{ seconds}} = \frac{x \text{ yards}}{195 \text{ seconds}}$$

Or simply divide 195 by 65 and multiply by 440.

$$195 + 65 = ? \text{ times } 440$$

**Step 4:** Do the necessary work or computation carefully.

$$\frac{440}{65} = \frac{x}{195}$$

Since

$$3 \times 65 = 195$$

$$3 \times 440 = 1320$$

Cross multiplying would also work but would be more time consuming.

**Step 5:** Put your answer into a sentence to make sure that you answered the question being asked.

Asaf could run 1320 yards in 195 seconds.

**Step 6:** Check to make sure that your answer is reasonable.

If Asaf ran 400  
195 seconds is  
or 1200, would

a reasonable answer.

**Example 1**  
week later  
Using this  
the pond?

**Step 1:** Find and underline or circle what the question is asking? how many frogs would she approximate are in the pond?

**Step 2:** Focus on and pull out important information.

100 tagged

5 out of 20 tagged

**Step 3:** Set up the work that is needed.

You could set up the proportion

$$\frac{5 \text{ tagged}}{20 \text{ total}} = \frac{100 \text{ tagged}}{x}$$

**Step 4:** Do the necessary work or computation carefully.

$$\frac{5}{20} = \frac{100}{x}$$

$$5x = 2000$$

$$5 \quad 5$$

$$\cancel{5x} = \frac{2000}{\cancel{5}}$$

$$x = 400$$

**Step 5:** Put your answer into a sentence to make sure that you answered the question being asked.

She would approximate that there are 400 frogs in the pond.

**Step 6:** Check to make sure that your answer is reasonable.

Since she tagged 100, and 5 out of 20, or 1 out of 4, came out tagged, then it is reasonable to have a total of 400 frogs in the pond.

**Example 15:** Jolia has \$300 in the bank, she works at a bakery and makes \$40 per day. If she deposits all of her earnings in the bank and does not make any withdrawals, how many days of work will it take for her to have \$740 in the bank?

**Step 1:** *Find and underline or circle what the question is asking.* How many days of work will it take for her to have \$740 in the bank?

**Step 2:** *Focus on and pull out important information.*

\$300 in the bank  
\$40 per day  
\$740 total

**Step 3:** *Set up the work that is needed.*

Let  $d$  stand for the number of days. Then  $40d$  is the amount of money earned in  $d$  days, and  $40d + 300$  is the amount of money she would have in the bank at the end of  $d$  days. So

$$40d + 300 = 740$$

$$\begin{array}{r} 40d + 300 = 740 \\ - 300 \quad -300 \\ \hline 40d = 440 \end{array}$$

$$\begin{array}{r} 40d = 440 \\ 40 \quad 40 \\ \hline 40 \end{array}$$

$$\begin{array}{r} 40 \\ d = 11 \end{array}$$

**Step 4:** *Do the necessary work or computation carefully.*

$$60h + 50 = 290$$

**Step 5:** *Put your answer into a sentence to make sure that you answered the question being asked.*

Let  $h$  stand for the number of hours. Then  $60h$  is the distance traveled in  $h$  hours, and  $60h + 50$  is the distance from Seattle in  $h$  hours. So

$$50 \text{ miles from Seattle}$$

$$\begin{array}{r} 60 \text{ miles per hour} \\ 290 \text{ miles} \end{array}$$

**Step 6:** *Check to make sure that your answer is reasonable.*

**Example 16:** A train is 50 miles from Seattle. It is traveling away from Seattle at a speed of 60 miles per hour. In how many hours will the train be 290 miles from Seattle?

**Step 1:** *Find and underline or circle what the question is asking.* In how many hours will the train be 290 miles from Seattle?

**Step 2:** *Focus on and pull out important information.*

**Step 3:** *Set up the work that is needed.*

Let  $d$  stand for the number of days. Then  $40d$  is the amount of money earned in  $d$  days, and  $40d + 300$  is the amount of money she would have in the bank at the end of  $d$  days. So

**Step 4:** *Do the necessary work or computation carefully.*

**Step 5:** *Put your answer into a sentence to make sure that you answered the question being asked.*

Jolia would have to work eleven days to have \$740 in the bank.

**Step 6:** *Check to make sure that your answer is reasonable.*

At \$40 per day, if she worked eleven days, she would have \$440. Add this to the \$300 she already had, and the total of \$740 in the bank.

Choose the correct answers. Write A, B, C, or D.

Solve. pages 10-11

pages 126-127

31. Is trying to activities at \$.50 each.

\$7.20 for a box of 24. What profit is made on each box?

- A \$12.00      C \$5.20      A \$28.85      C \$39.85  
B \$4.80      D not given      B \$19.85      D not given

32. How many boxes must be sold to raise \$120.00?

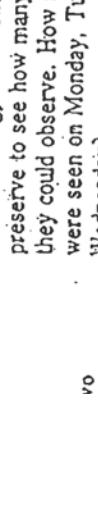

- A 25      C 240      A 20  
B 40      D not given      B 8  
C \$2 80      D not given

BIRD SIGHTINGS

33. If another school in to sell the each, what is the for each box?

- C \$2 80  
D not given

Incover &  
Answer

34. If the average number of birds

- A 65      C 45  
B 60      D not given

35. What was the average number of birds seen on each of these days?

- A 15; 20      C 13  
B 14; 18      D not given

36. 12.5, 12.41, 12.32, —, —  
A 11.5, 11.14      C 12.23, 12.14  
B 11.42, 10.52      D not given

37. 6, 12, 11, 22, —, —  
A 44, 43      C 21, 42  
B 28, 27      D not given  
Pages 102-103

- C 0  
D not given

Use the graph below for 38-40, pages 158-159

Use the graph below for 38-40, pages 158-159

38. The ornithology club went to the wildlife preserve to see how many kinds of birds they could observe. How many birds in all were seen on Monday, Tuesday, and Wednesday?

- A 65      C 45  
B 60      D not given

39. What was the average number of birds seen on each of these days?

- A 20      C 13  
B 21      D not given

40. If the goal of the club is to observe 100 different birds for the week, what total will be needed for Thursday and Friday?

Questions 23-27.

DIRECTIONS : Questions 23 to 27 inclusive are based on the data given below. These data show the performance rates of the employees in a particular division for a period of six months.

Employee	Jan.	Feb.	Mar.	April	May	June
A	96	53	64	48	76	72
B	84	58	69	56	67	79
C	73	68	71	54	59	62
D	98	74	79	66	86	74
E	89	78	67	74	75	77

23. According to the data given above, the average monthly performance for a worker is, MOST NEARLY,  
A. 66                    B. 69                    C. 72                    D. 75
24. According to the data given above, the mean monthly performance for the division is, MOST NEARLY,  
A. 350                    B. 358                    C. 387                    D. 429
25. According to the data given above, the employee who shows the least month-to-month variation in performance is  
A. A                    B. B                    C. C                    D. D
26. According to the data given above, the employee who shows the GREATEST range in performance is  
A. A                    B. B                    C. C                    D. D
27. According to the data given above, the median employee with respect to performance for the six-month period is  
A. A                    B. B                    C. C                    D. D
28. If the rate of a representative sample of workers in performing an element of work is plotted on a graph prior to the establishment of standards, the graph will often approximate a normal curve. In such a case, the percentage of workers whose time is more than two standard deviations above the mean is APPROXIMATELY  
A. 2 1/2%                    B. 5%                    C. 10%                    D. 25%

23.        C  
24.        B  
25.        C

26.        A  
27.        B  
28.        A

*MATH*

The management study of employee absence due to sickness is an effective tool in planning. Answer questions 8 through 10 solely on the data given below.

Number of days absent per worker (sickness)	1	2	3	4	5	6	7	8 or over
--	---	---	---	---	---	---	---	--------------

Number of workers	76	23	6	3	1	0	1	0
-------------------	----	----	---	---	---	---	---	---

Total number of Workers: 400

Period covered: Jan 1, 1988- Dec 31, 1988

8. The total number of worker days lost due to illness in 1988 was  
A. 110      B. 137      C. 144      D. 164
9. What percent of the workers had 4 or more days absence due to illness during 1988?  
A. .25%      B. 2.5%      C. 1.25%      D. 12.5%
10. Of the 400 workers studied, the number who lost no days due to sickness in 1988 was  
A. 190      B. 236      C. 290      D. 346

The following chart show the differences between the rates of production of employees in Department D in 1978 and 1988. Answer questions 14 through 16 solely on the basis of the information given in the chart.

<u>Number of Employee Producing Work Units Within Range of 1978</u>	<u>Number of Work Units Produced</u>	<u>Number of Employee Producing Work Units Within Range in 1988</u>
7	500 - 1000	4
14	1001 - 1500	11
26	1501 - 2000	28
22	2001 - 2500	36
17	2501 - 3000	39
10	3001 - 3500	23
4	3501 - 4000	9

14. Assuming that within each range of work units produced, the average production was at the mid point of that range (e.g., category 500 - 1000 = 750), then the average number of work units produced per employee in 1978 fell into the range
- A. 1001 - 1500    B. 1501 - 2000    C. 2001 - 2500    D. 2501 - 3000
15. The ratio of the number of employees producing more than 2000 work units in 1978 to the number of employees producing more than 2000 work units in 1988?
- A. 1:2    B. 2:3    C. 3:4    D. 4:5
16. In Department D, which of the following were greater in 1988 than in 1978?
- 1 Total number of employees  
2 Total number of work units produced  
3 Number of employees producing 2000 or fewer work units
- A. 1, 2 and 3  
B. 1 and 2, but not 3  
C. 1 and 3, but not 2  
D. 2 and 3, but not 1
17. Assume the following:  
  
Unit S's production fluctuated substantially from one year to another. In 1969, Unit S's production was 100% greater than in 1968. In 1970, Unit S's production was 25% less than in 1969. In 1971, Unit S's production was 10% greater than in 1970.  
  
On the basis of this information, it is correct to conclude that Unit S's production in 1971 exceeded Unit S's production in 1968 by
- A. 65%    B. 85%    C. 95%    D. 135%
18. Agency "X" is moving into a new building. It has 1500 employees presently on its staff and does not contemplate much variance from this level. The new building contains 100 available offices each with a maximum capacity of 30 employees. It has been decided that only 2/3 of the maximum capacity of each office will be utilized. The total number of offices that will be occupied by Agency "X" is
- A. 30    B. 66    C. 75    D. 90

19. One typist completes a form letter every 5 minutes and another typist completes one every 6 minutes. If the two typists start together, how many minutes later will they again start typing new letters simultaneously and how many letters will they have completed by that time?

- A 11 minutes - 30 letters
- B 12 minutes - 24 letters
- C 24 minutes - 12 letters
- D 30 minutes - 11 letters

20. During one week a typist produces 10 fewer pages per hour of work than they usually do. If it ordinarily takes them six hours to produce a 300-page report, how many hours longer will that same 300-page report take them during the week when they produce more slowly?

- A 1 1/2 hours longer
- B 1 2/3 hours longer
- C 2 hours longer
- D 2 3/4 hours longer

21. Of the following, the biggest disadvantage in allowing a free flow of communications in an agency is that such a free flow

- A decreases creativity
- B increases the use of the "grapevine"
- C lengthens the chain of command
- D reduces the executive's power to direct the flow of information.

22. A downward flow of authority in an organization is one example of

- A horizontal communications
- B informal communications
- C circular communications
- D vertical communications.

23. Workers who belong to a cohesive group are generally thought to

- A have more job related anxieties than those who do not
- B be less well adjusted than those who do not
- C derive little satisfaction from the group
- D conform to group norms more closely than those in non cohesive groups.

**2004-2005 5TH GRADE****ANSWERS****SOLUTIONS**

1.  $(100+100)+(200+100)+(300+100) = 100+200+300+300$ .

C

2. Two-dozen truckloads of dirt =  $2 \times 12 = 24$  truckloads. Two fewer than that is  $24 - 2 = 22$  truckloads.

- A) 10    B) 12    C) 20    D) 22

3.  $27 \div 3 = 9$ , and  $9 = 3 \times 3$ .

- A) 3    B) 6    C) 9    D) 27

4. For each coin that lands tails up, two land heads up. Make a list. Look for a sum of 9: 1t, 2h; 2t, 4h; 3t, 6h. Finally,  $3+6 = 9$ .

- A) 3    C) 5    D) 6

5. 19 tens – 19 ones =  $(19 \times 10) - (19 \times 1) = 190 - 19 = 171$

- A) 1871    B) 342    C) 171    D) 9

6.  $4 \times 8 \times 12 = 4 \times (4 \times 2) \times 12 = (4 \times 4) \times (2 \times 12) = 16 \times 24$ .

- A) 32    B) 24    C) 20    D) 16

## What's up?

7. My neck, which grows 5 cm in 10 days, grows  $10 \times 5 = 50$  cm in  $10 \times 10 = 100$  days.

- A) 5    B) 10    C) 25    D) 100

8.  $(33+44+55+66) \div 11 = 3+4+5+6 = 18$ .

- A) 18    B) 11    C) 9    D) 7

9. Even numbers divisible by 3 are divisible by 6.

- C) 366    D) 466

- C

10. Pete got \$3.60 in change, so 4 frozen pizzas cost Pete \$20.00 – \$3.60 = \$16.40. One frozen pizza cost Pete  $\$16.40 \div 4 = \$4.10$ .

- A    C) \$6.25    D) \$9

11.  $(48 \times 2) + (48 \times 3) + (48 \times 4) = 48 \times (2 + 3 + 4) = 48 \times 9$ .

- B) 9    C) 5    D) 3

- B

12. The ratio  $(4 \text{ side-lengths}) \div (2 \text{ side-lengths}) = 4 \div 2 = 2$ .

- A) 1    B) 2    C) 4    D) 8

13. Four years ago, Tom was 8. Six years ago, he was 6. The average of 8 and 6 is 7.

- A) 11    B) 7    C) 5    D) 4

14. 12 hours before noon is 12 midnight. 12 minutes before 12 midnight is 11:48 PM. I was wandering around at 11:48 PM.

- A) 11:48 A.M.    B) 12:12 A.M.

- C) 11:48 P.M.    D) 12:12 P.M.

15. Two million =  $2,000,000 = 2,000 \times 1000$ .

- A) 200  $\times$  100    B) 200  $\times$  1000    C)  $2000 \times 1000$     D)  $20,000 \times 10$

- C

16. The greatest 3-digit number is 999, and the greatest 4-digit number is 9999. Their sum is  $999 + 9999 = 10,998$ .

- D) 9998    B) 9999    C) 10,000    D) 10,998

**2004-2005 5TH GRADE CONTEST SOLUTIONS****Answers**

12. The ratio  $(4 \text{ side-lengths}) \div (2 \text{ side-lengths}) = 4 \div 2 = 2$ .

- A) 1    B) 2    C) 4    D) 8

13. Four years ago, Tom was 8. Six years ago,

- he was 6. The average of 8 and 6 is 7.

- A) 11    B) 7    C) 5    D) 4

14. 12 hours before noon is 12 midnight. 12

minutes before 12 midnight is 11:48 PM.

I was wandering around at 11:48 PM.

- A) 11:48 A.M.    B) 12:12 A.M.

- C) 11:48 P.M.    D) 12:12 P.M.

15. Two million =  $2,000,000 = 2,000 \times 1000$ .

- A) 200  $\times$  100    B) 200  $\times$  1000    C)  $2000 \times 1000$     D)  $20,000 \times 10$

- C

16. The greatest 3-digit number is 999, and the greatest 4-digit number is 9999. Their sum is  $999 + 9999 = 10,998$ .

- D) 9998    B) 9999    C) 10,000    D) 10,998

17. The ape ate 6 bananas daily. It ate  $5 \times 6 = 30$  bananas in 5 days.

- A) 20    B) 24    C) 30    D) 120

- C

18. Every side of the triangle is 6 cm long. The triangle's perimeter is  $6+6+6 = 18$  cm.

- A) 2    B) 6    C) 18    D) 36

- C

19. First 6 months take about  $6 \times 30 = 180$  days, so day 199 falls in month July.

- A) May    B) June    C) July    D) August

- C

20. When 728 is divided by 72, the remainder is 8.

- A) 7    B) 8    C) 28    D) 72

- D

21. The product  $1111 \times 1111$  equals 1,234,321. The largest odd digit in this product is 3.

- A) 1    B) 3    C) 4    D) 5

## 2004-2005 6TH CONTEST

## Answers

30. There are 90 2-digit numbers starting with 10 and ending with 99. Exactly half of them have an even digit-sum.  
 A) 45 B) 48 C) 50 D) 52

31.  $80 \text{ km in } 60 \text{ min.} = 8 \text{ km in } 6 \text{ min.} = 24 \text{ km in } 18 \text{ min.}$   
 A) 20 B) 24 C) 28 D) 30

32.  $2^{2005} = 2^1 \times 2^{2004} = 2^{2004} + 2^{2004}$ .  
 A) 1 B) 2 C) 2004 D)  $2^{2004}$

33. The sum is  $2+3+5+7+(1+1)+(1+3)+(1+7)+(1+9) = 41$ .  
 A) 77 B) 76 C) 41 D) 40

34. If 4 pears weigh as much as 6 peaches, and 6 peaches weigh as much as 90 grapes, then 4 pears weigh as much as 90 grapes.  
 A) 4 B) 6 C) 8 D) 12

35. The perimeter of the square is 32. A side has length 8, and the area is 64. Half of the square is shaded, so the shaded area is 32.  
 A) 4 B) 8 C) 16 D) 32

36.  $(51 - 1) + (52 - 2) + \dots + (99 - 49) + (100 - 50) = 50 + 50 + \dots + 50 + 1 = 50 \times 50 = 2500$ .  
 A) 2000 B) 2500 C) 2550 D) 5000

37. I spent \$360 for 110 services, 100 with a smile, 10 without. The 10 without a smile cost as much as 20 with a smile. It costs \$360 for 120 services with a smile, or \$3 for one service with a smile.  
 A) \$3.00 B) \$3.15 C) \$3.30 D) \$3.45

38. In 24 hours, the hour hand goes around the clock 2 times, the minute hand 24 times, and the second hand  $60 \times 24 = 1440$  times.  
 A) 144 B) 1440 C) 1466 D) 86400

39. Try  $2 \times 3 \times 5 = 60$ , which is divisible by  $2 \times 3$ ,  $2 \times 5$ ,  $3 \times 5$ , &  $2 \times 3 \times 5$ . The product of 3 primes is always divisible by 4 non-primes  $> 1$ .  
 A) 1 B) 2 C) 3 D) 4

40. Keep adding consecutive integers until you reach 120¢:  $1¢ + 2¢ + 3¢ + \dots + 14¢ + 15¢ = 120¢$ , so I am 15 years old.  
 A) 10 B) 12 C) 15 D) 20

30. A

31. B

32. D

33. C

34. A

35. D

37. A

38. C

39. D

40. C

**Answers**

- C) 7  
C) 3  
3. The sum is  $180^\circ$ . The 3rd angle must be  $180^\circ - (20^\circ + 40^\circ) = 120^\circ$ .  
C)  $90^\circ$
4.  $3456 \times 0.001 = 3.456$ . This rounds up to 3.5.

- C  
2. D  
5. Since 720 minutes =  $(720 \div 60)$  hours = 12 hours, my bad hair day began at 7:20 A.M.  
A) 1:20 A.M. B) 7:20 A.M.  
C) 12:00 P.M. D) 7:08 P.M.
6. The sum =  $5 \times 500 = 2500 = 10 \times 250$ .

- C  
7. C  
B)  $1^3 + 4^2$  C)  $1^2 + 4^3$  D)  $1^{1+3^4}$   
May: 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, and 31.  
C) 12 D) 13  
 $= 1 \times 1 \times 1 = 1$ . A) 1 B) 3 C) 6 D) 12  
nickels = 1 quarter, 500 nickels = 100 quarters.  
B) 250 C) 500 D) 2500
12. All side-lengths are equal, so the perimeter is divisible by 4.
13. A  
every 50, which is 2%.  
D) 50
14.  $\frac{33}{50}$   
B)  $\frac{21}{35}$  C)  $\frac{24}{40}$  D)  $\frac{33}{50}$
15.  $\sqrt{100} = \sqrt{36} + \sqrt{7} \leftrightarrow 10 = 6 + \sqrt{7}$ , so  $4 = \sqrt{7} = \sqrt{16} = 4$ .  
C) 16 D) 64

16. As shown, 2 squares with a common side form a rectangle.   16. C

17. Each of the 9 numbers in the first sum is 1 more than the number in the same position in the second sum.  
A) 9 B) 10 C) 90 D) 100  
18. Uncle Bookworm eats 2 books a week, or D
19. The largest odd factor of 81 is 81.  
A) 3 B) 9 C) 27 D) 81  
20.  $(\frac{2}{3})^3 = \frac{2 \times 2 \times 2}{3 \times 3 \times 3} = \frac{8}{27}$ . A) 2 B)  $\frac{6}{9}$  C)  $\frac{8}{3}$  D)  $\frac{8}{27}$   
21. To seat the most students, put the students in seats 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, and 25. That's 13 seated students.  
A) 11 B) 12 C) 13 D) 24  
22. The smallest multiple of 10 that's greater than  $9 \times 9 = 81$  is 90.  
A)  $9 \times 9 + 10$  B)  $9.1 \times 9.1$  C)  $9 \times 10$  D)  $10 \times 10$   
23.  $\frac{6}{5} - \frac{5}{6} = \frac{36}{30} - \frac{25}{30} = \frac{11}{30}$ .  
A)  $\frac{1}{5}$  B)  $\frac{1}{6}$  C)  $\frac{1}{30}$  D)  $\frac{11}{30}$   
24. The rear wheel's diameter is 6 cm more than the front wheel's. The rear wheel's circumference is  $(d+6) \times \pi$  cm, which is  $6\pi$  cm more than the front wheel's.  
B)  $3\pi$  B)  $6\pi$  C)  $9\pi$  D)  $36\pi$   
25. All sides of a regular polygon have equal lengths.  
B) equilateral C) scalene D) isosceles  
26. My age could be 8 and yours could be 16. When you divide 16 by 5, the remainder is 1.  
A) 1 B) 2 C) 3 D) 4  
27. If a rectangle's perimeter is 30 cm, and its area is  $56 \text{ cm}^2$ , then the longer side's length is 8 cm, and the shorter side's length is 7 cm.  
B) 5 C) 20 D) 26  
28. Try some numbers. One set that works is 12 and 13. (The sum always exceeds the difference by twice the smaller number.)  
A) 0 B) 6 C) 12 D) 48

## 2004-2005 8TH GRADE CONTEST SOLUTIONS

## Answers

## 8TH GRADE

## Ans.

1. Subtract 1000 from each: 110–020. A) 102 B) 101 C) 90 D) 20 1. D

2. Each side of the square has  $4 \div 4 = 1$ . The square's area = 2. A

**THE  
IS**

3.  $300 \div 200 = 3/2 = 1 \times (3/2) = 1 \div (2/3)$ .

- A)  $\frac{1}{3}$  B)  $\frac{1}{2}$  C)  $\frac{2}{3}$  D)  $\frac{3}{2}$

4. Five-fourths =  $5/4$ , which is  $\frac{4}{5}$  A)  $1\frac{1}{4}$

5.  $(2005 - 2005) - 2004 = -2004$ . A) 1 B) -2004 C) -2005 D) -2006 5. B

6. 120 seconds = 2 minutes, so the time is 12:02 A.M.  
A) 12:02 P.M. B) 12:02 A.M. C) 2 P.M. D) 2 A.M. 6. B

7.  $24 \div 4 \times 2 + 4 = [(24 \div 4) \times 2] + 4 = (6 \times 2) + 4 = 12 + 4 = 16$ .

7. C

8.  $\frac{1}{2} \times 4 = 2$ , so its reciprocal is  $\frac{1}{2} = 2 \times \frac{1}{4}$ .  
A)  $2 \times \frac{1}{4}$  B)  $\frac{1}{2} \times 4$  C)  $\frac{1}{2} \times \frac{1}{4}$  D)  $2 \times 4$

9.  $1.000 - 0.995 = 0.005$ ;  $1.000 - 0.990 = 0.010$ ;  
 $1.010 - 1.000 = 0.010$ ;  $1.100 - 1.000 = 0.100$ .  
A) 0.995 B) 0.99 C) 1.01 D) 1.1

10. C not a prime, so the sum is  $2+3+5+7 = 17$ .  
16 C) 17 D) 18

11.  $2 \times \frac{1}{2} \times 4 \times \frac{1}{4} \times 6 \times \frac{1}{6} = (2 \times \frac{1}{2}) \times (4 \times \frac{1}{4}) \times (6 \times \frac{1}{6}) = 1 \times 1 \times 1 = 1$ .  
C) 12

12. The sum of the measures of each possible pair of angles is  $120^\circ$ , so each angle is  $60^\circ$ . Therefore, triangle T must be equilateral.  
C) obtuse D) equiangular

13. B

- B) 4 C) 5 D) 6

14. D Of the choices below, D has the largest value.  
A) 7 B)  $(-1)^2 = 1$  C)  $(-3)^2 = 9$

15. C  $9000\% + 900\% + 90\% + 9\% = 90 + 9 + 0.9 + 0.09 = 99.99$ .  
B) 999.9 C) 99.99 D) 0.9999

## SOLUTIONS

## Ans.

## 16.

3. C

- A) 2% B) 4% C) 25% D) 50%

4. D Since  $\sqrt{256} = 16$ ,  $\sqrt{\sqrt{256}} = \sqrt{\sqrt{4}} = 2$ .  
A) 2 B) 4 C) 8 D) 16

5. B  $0.3 \times 0.4 = 0.12$ .  
A) 30 B) 24 C) 12 D) 10

6. B  $1/5 = 0.2 < 0.33 < 0.4 = 2/5$ ; 0.33 closer to 2/5.  
A) 0.2 B) 0.3 C)  $\frac{2}{5}$  D)  $\frac{3}{5}$

7. C I had 4 pennies; need 3 coins = 45¢, so I  
need 1 quarter, 2 coins = 20¢ are 2 dimes.

- A) 0 B) 1 C) 2 D) 7

8. B  $15 \text{ m} + 60 \times 0.01 \text{ m} + 0.02 \times 1000 \text{ m} = 22.1 \text{ m}$ .  
A) 0.221 m B) 2.21 m C) 22.1 m D) 221 m

9. C There are four even factors of 222. They are 2, 6, 74, and 222.  
A) 2 B) 6 C) 3 D) 7

10. C The average of 1, 2, . . . , 98, 99 is the middle number, 50.  
A) 49.00 B) 49.50 C) 49.75 D) 50.00

11. C In the large circle, if  $r = 2$ , then the large circle's area would  
be  $4\pi$ . Small circle then has  $r = 1$ , so  $A = \pi$ . That's 25% of  $4\pi$ .  
A) 20 B) 25 C) 40 D) 50

12. B If  $2/3$  cup of fish food feeds 8 goldfish,  
then  $1/3$  cup feeds 4 fish, and  $\frac{1}{4}$  cup  
feeds 12 fish. Thus, 4 cups feed 48 fish.  
A) 12 B) 24 C) 36 D) 48

13. D The square of an odd number is always odd.  
A) prime B) odd C) even D) zero

14. C Since the reciprocal of  $\frac{1}{x^3}$  is  $x^3$ ,  $4x = x^3$ . The value  $x = 2$  works.  
A)  $\frac{1}{8}$  B)  $\frac{1}{2}$  C) 2 D) 8

15. B

16. A

17. D

18. C

### Arithmetic Word Problems

**Answer the first two questions based on the information below:**

Over the course of a week you coded and recorded 201 reports on Monday, 207 reports on Tuesday, 356 on Wednesday, 72 on Thursday (when you went home early) and 413 on Friday. A total of 1,057 reports had come in altogether. How many did you code and report and how many were left for the next week?

- 1) Done: a) 948    b) 1,048    c) 1,047    d) 947
- 2) Left: a) 1,057    b) 9    c) 10    d) None
- 3) You must lay out a seating plan for a small office. The office is 10 ft by 16 ft. The Agency guideline is 100 square feet for an Associate Staff analyst (with desk and chair and cabinets) and 49 square feet for a clerical assistant. Following the Agency guidelines, what is the maximum number of staff that can be accommodated in the office?  
a) One    b) Two    c) Three    d) Four, with crowding
- 4) The Mayor needs a count of homeless persons receiving shelter in Bushwick. 674 individual persons in need of shelter came to the Bushwick Armory seeking admission and were accommodated but sixty-three families with an average of four members per family were re-directed to a family shelter in Crown Heights. A further set of homeless persons were transported to Bushwick after hours; twelve from the parks patrol, twenty-seven by van from the subway patrol and six late transfers from another shelter. How many were sheltered at the Bushwick Armory?  
a) 674    b) 252    c) 719    d) 971
- 5) Assume the Department of Citywide Administrative Services is giving an Associate Staff Analyst Open Competitive Exam and 5,712 candidates have filed to take the exam.

The Board of Education has offered the use of 32 classrooms at Roosevelt High School, 54 classrooms at Julia Richmond High School, 60 classrooms at the Music and Art High School and 78 classrooms at Murray Bergstrom High School for the exam. DCAS is limited to 36 candidates per classroom. What is the smallest number of schools that DCAS could use to avoid overcrowding. (You may ignore geographical convenience to the candidates.)

- a) 4    b) 3    c) 2    d) It depends.

- 6) In the 19<sup>th</sup> century British school masters used to ask students, "If a herring and a half cost a penny and a half, how many can you get for one shilling?" Please note that at the time there were 240 pennies, or twenty shillings, in one British pound.
- a) 1 ½   b) 6   c) 12   d) 20

- 7) The City used to pay civil servants once a month, years ago. By the 1960's the City had gone generally to biweekly payments. As a result, twenty-six biweekly pay checks are issued most years, but there are a number of days left over not covered by the pay checks.

In a non-leap year, how many days are not covered by the twenty-six paychecks?

- a) 1   b) 2   c) 7   d) 14
- 8) Since the City pays biweekly, and days are "left over" each year, there will be some years when the first day of the year is pay day, and the last day of the year is pay day. During such a year how many biweekly pay days will occur?
- a) 12   b) 26   c) 27   d) 25
- 9) Annual salaries are actually paid using calendar days to compute biweekly rate of pay. If a worker is earning \$73,000 annually, his or her regular biweekly gross salary (not including overtime) is \$2,800.

At the start of a fiscal leap year of 366 days the biweekly salary \_\_\_\_\_.

- a) stays the same   b) gets a raise   c) drops to \$2,792.35   d) drops to \$2,792
- 10) The Organization of Staff Analysts dues rate is .007 of a member's salary. Which of the five choices below is NOT equivalent to .007 of salary.

- a) 7/1000   b) .07%   c) .7%   d) seven one thousandths
- 11) As an Analyst at the Department of Design and Construction you have been sent out to measure the space available in a work site. The site is odd, with only three sides. Two sides form a right angle and measure three meters and four meters respectively. The third side's measurement is so hard to take due to obstacles that you use the formula  $a^2 + b^2 = c^2$  to get an answer. The length of the third side is \_\_\_\_\_.

- a) 25 meters   b) 25 yards   c) 5 meters   d) 15 feet

**Answer the next three questions based on the information below:**

John's hours are from 9:15 AM until 5:15 PM with duty free (unpaid) hour for Lunch. John worked overtime on Monday through Friday for two weeks straight. The first week he finished work at 6:30, 6:15, 6:15, 7:15 and 6:15 PM. The second week the work was more extensive and he worked until 7:30, 7:30, 7:15, 7:15 and 7:15 PM.

- 12) As a City employee, John's union contract calls for credit to be given in quarter hour segments after the first hour of overtime. How many hours did John work over time in the first week?
- a) 6    b) 6  $\frac{1}{4}$     c) 6  $\frac{1}{2}$     d) 6.15
- 13) How many hours did John work in the second week?
- a) 10    b) 10.30    c) 10  $\frac{1}{2}$     d) 1
- 14) John's union contract calls for time and one half after forty hours per week of work. John earns \$20 per hour. How much does John earn for overtime for the whole two weeks worked.
- a) Can't be computed.    b) 102.50    c) 325.00    d) 402.50

**Answer the next four questions based on the information below:**

s

as follows:

16,15,17,17,13,4,5  
18,18,21,17,17,8,6  
17,16,18,17,19,8,17  
11,14,17,17,17,8,9  
17

- 15) What is the **mean** for the month?

a) 12    b) 14    c) 16    d) 17

- 16) What is the **median** for the month?

a) 12    b) 14    c) 16    d) 17

17) What is the mode for the month?

- a) 18    b) 14    c) 16    d) 17

18) What month is being recorded?

- a) January    b) February    c) March    d) April

19) Mary worked part time for the City. Her hours worked in a single week were  $3\frac{1}{4}$ ,  $2\frac{1}{2}$ ,  $3\frac{3}{4}$ ,  $1\frac{1}{4}$  and  $3\frac{1}{4}$ . How many hours did she work?

- a) 14    b)  $12\frac{7}{4}$     c)  $13\frac{3}{4}$     d)  $13\frac{1}{2}$

20) As an Associate Staff Analyst at the Department of Health you are collecting data on flu shots given in Senior Centers. In Center A, 240 out of 300 seniors were vaccinated. Center B vaccinated 180 out of 240 and Center C gave shots to 90 out of 150 seniors. In your report, what is the fraction of all three centers' seniors who were inoculated? (Reduce to the lowest common denominator.)

- a)  $510/690$     b)  $17/23$     c)  $255/345$     d)  $\frac{3}{4}$

21) Unemployment insurance pays up to \$430 a week in benefits (twenty-five dollars of that is due to the temporary Obama stimulus.) If an Associate Staff Analyst earning \$73,000 per year is laid off, what percentage of his or her weekly gross does the UIB grant cover? (Round to the nearest percent.)

- a) 30%    b) 50%    c) 31%    d) 22%

22)

ag  
ps  
to  
d  
your  
raise.

. (Ignore union contractual longevity  
monies.)

- a) \$90,000    b) \$108,000    c) \$86,400    d) \$72,000

itted provisional employees to avoid  
for a new employee to join the current  
s salary. The cost to the City is estimated  
d savings to the City of a \$50,000 a year  
employee not joining the pension plan (per year)?

- a) \$14,500    b) \$11,500    c) \$7,250    d) \$5,750

- 24) An Analyst at the Mayor's Office of Film and Television told her boss that the work on providing licenses was 44.7% complete. How much was left to complete?
- a) Less than half.   b) 56.3%   c) 55.3%   d) 57.3%
- 25) Half of your coworkers took off today. Nine tenths of the rest are at lunch. Mazie, your coworker and you are the only Analysts available and the phones won't stop ringing. Each of your coworkers has a desk phone and so do you. How many coworkers do you have at the office today?
- a) 10   b) 20   c) 40   d) 19
- 26) As an Analyst at the Department of Consumer Affairs you are evaluating products for a consumer friendly newsletter. "Skippy" Peanut Butter is on sale in an 18 oz jar for \$1.98, or a 28 oz jar for \$3.08, or a 48 oz king size jar for \$5.28. The best buy is the \_\_\_\_\_. (Keep in mind that cost is a major factor, but not the only one.)
- a) 18 oz jar   b) 28oz jar   c) 48 oz jar   d) cannot be determined
- 27) As an Associate Staff Analyst for the Department of Corrections you will need to purchase, per month, for the facility, an average of six retail size Mars bars per inmate. Since the bars cost 36 cents each and the facility holds 1,800 inmates with purchasing privileges, how many boxes of 36 bars do you need to order per month?
- a) 1,296   b) 10,800   c) 300   d) one for the Chief Warden will do.
- 28) As a Staff Analyst at the New York City System you are expected to be able to calculate pensions is "down". A candidate for retirement at age 62 is in T service and is due 2% per year of service times the number of years times the average of the last three years of service. The candidate earned \$58,000 three years ago, \$61,000 two years ago and \$64,000 last year. Leaving aside details, excess annuity etc., a "ball park" estimate of the probable retirement allowance would be...
- a) \$7,320   b) \$10,166.62   c) \$25, 600   d) \$24,400
- 29) As an Analyst for the Department of Transportation you have set up a car Counting sensor array on Pine Street. Between midnight and 5:30 AM a total of 165 vehicles passed along the street. The average number vehicle passing per hour is:
- a) unable to be determined   b) 81   c) 110   d) 30

- 30) At FISA (The Financial Information Services Agency) only 1/3 of the ordered computers had been installed and 2/3 of those installed did not work. What fraction of the newly ordered computers were available to help the Analysts provide answers to emails seeking information?
- a) 1/3    b) 2/6    c) 1/9    d) 1/12
- 31) As an Associate Staff Analyst doing training at the Parks Department you teach 52 Park Rangers one week, 37 managers the next, 12 pruners and six cutters the following week and you close out the month with a week of instruction delivered to a mixture of 38 workers in clerical and administrative positions.
- How many staff did you instruct?
- a) 38    b) 112    c) 50    d) 145

**Answer Key:**

- |                |       |       |       |
|----------------|-------|-------|-------|
| 1. * no answer | 11. c | 21. c | 31. d |
| 2. b           | 12. b | 22. c |       |
| 3. c           | 13. c | 23. a |       |
| 4. c           | 14. d | 24. c |       |
| 5. b           | 15. b | 25. a |       |
| 6. c           | 16. d | 26. d |       |
| 7. a           | 17. d | 27. c |       |
| 8. c           | 18. b | 28. d |       |
| 9. c           | 19. a | 29. d |       |
| 10. b          | 20. b | 30. c |       |
